PREVALENCE OF DISEASE.

No health department, State or local, can effectively prevent or control disease without knowledge of when, where, and under what conditions cases are occurring.

DISEASE CONDITIONS AMONG TROOPS IN THE UNITED STATES.

The following data are taken from telegraphic reports received in the office of the Surgeon General of the United States Army for the week ended March 21, 1919. Reports from the American Expeditionary Forces are delayed in transmission, and the "current week" for troops in the American Expeditionary Forces is not the same period as "current week" for troops in the United States.

	Current week.	Last week.
Annual admission rate per 1,000 (all causes)	971.07	1,138.36
All troops in United States	1,272.48	1,302.84
American expeditionary forces	865.00	1,082.22
Annual admission rate per 1,000 (disease only)	832.15	924.76
All troops in United States	1,064.57	1,094.57
American expeditionary forces	750.36	866.09
Noneffective rate per 1,000 on day of report	48.40	53.58
All troops in United States [1]	58.65	62.93
American expeditionary forces	44.80	50.39
Annual death rate per 1,000 (all causes)	10.57	13.81
All troops in United States [1]	10.18	9.71
American expeditionary forces	10.71	15.21
Annual death rate per 1,000 (disease only)	8.36	11.86
All troops in United States [1]	9.59	9.22
American expeditionary forces	7.89	12.76

[1] Sick and death rates among troops in the United States will continue to be relatively high, as the numerical strength of troops in the United States continues to decline from week to week as a result of demobilization. Well men only are eligible for discharge, while the sick and otherwise disabled are retained in service for further treatment. The continued influx of sick and wounded (properly chargeable to commands overseas) is another factor tending to increase rates in the United States and to diminish correspondingly similar rates overseas.

Cases of special diseases reported during the week ended Mar. 21, 1919.
